Cashier SOP — Customer = Mobile Number

Point of Sale · Customer Identification Procedure

Golden rule: our customer IS their mobile number — always search by the number before creating a new customer

1 In POS, open the customer selection screen and type the customer's **mobile number** in the search box.

2 **If the customer appears** in the results → **select them** (this is a returning customer). Do NOT create a new one.

3 **If not found** → create a new customer and enter the mobile number in:
• the Name field • **and the Mobile field as well**

4 Type the number as **8 digits, no spaces or symbols** (e.g. **30001234**) — same format every time so search can find it.

✗ Do NOT

- Create a new customer before searching by the number.
- Type the number in different formats (spaces / +974 / extra zeros).
- Add words to the number (e.g. "Ahmed 3000...") — keep it a clean number.

✓ Always

- Search by the number **first, every time**.
- A returning customer = the same record (so we can track their purchases & loyalty).
- One number = one customer.

Why this matters: it lets us recognize returning customers, track their purchases, and build loyalty/offers — and stops the same customer being duplicated many times.
